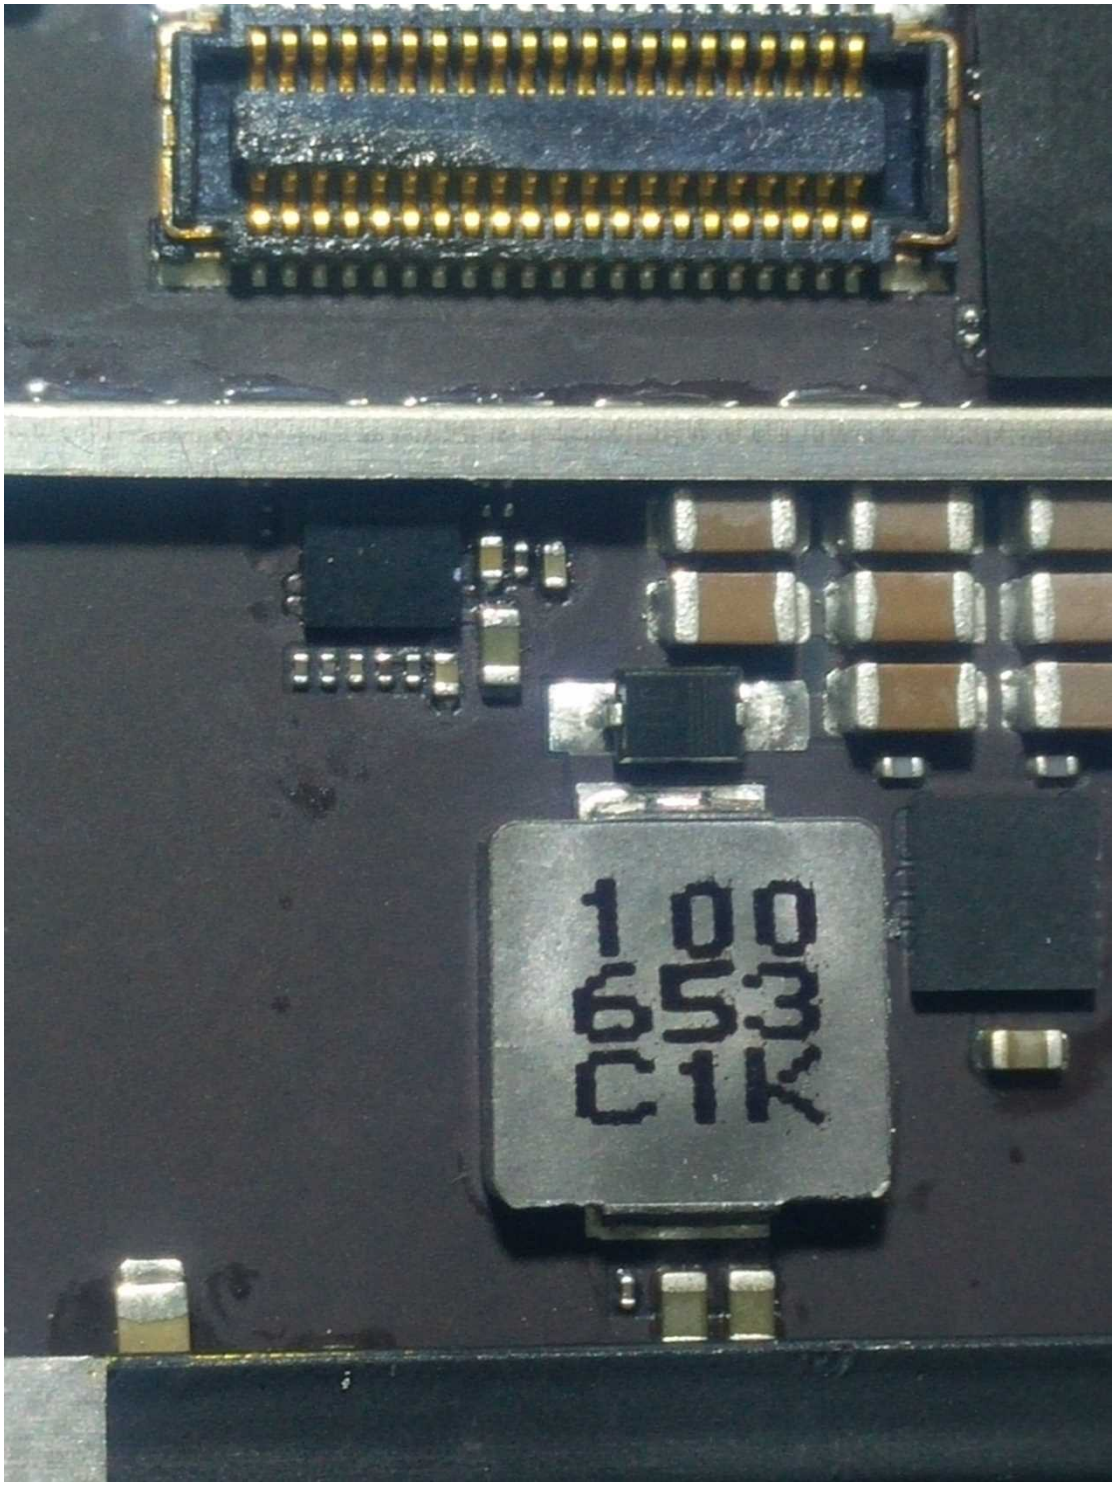
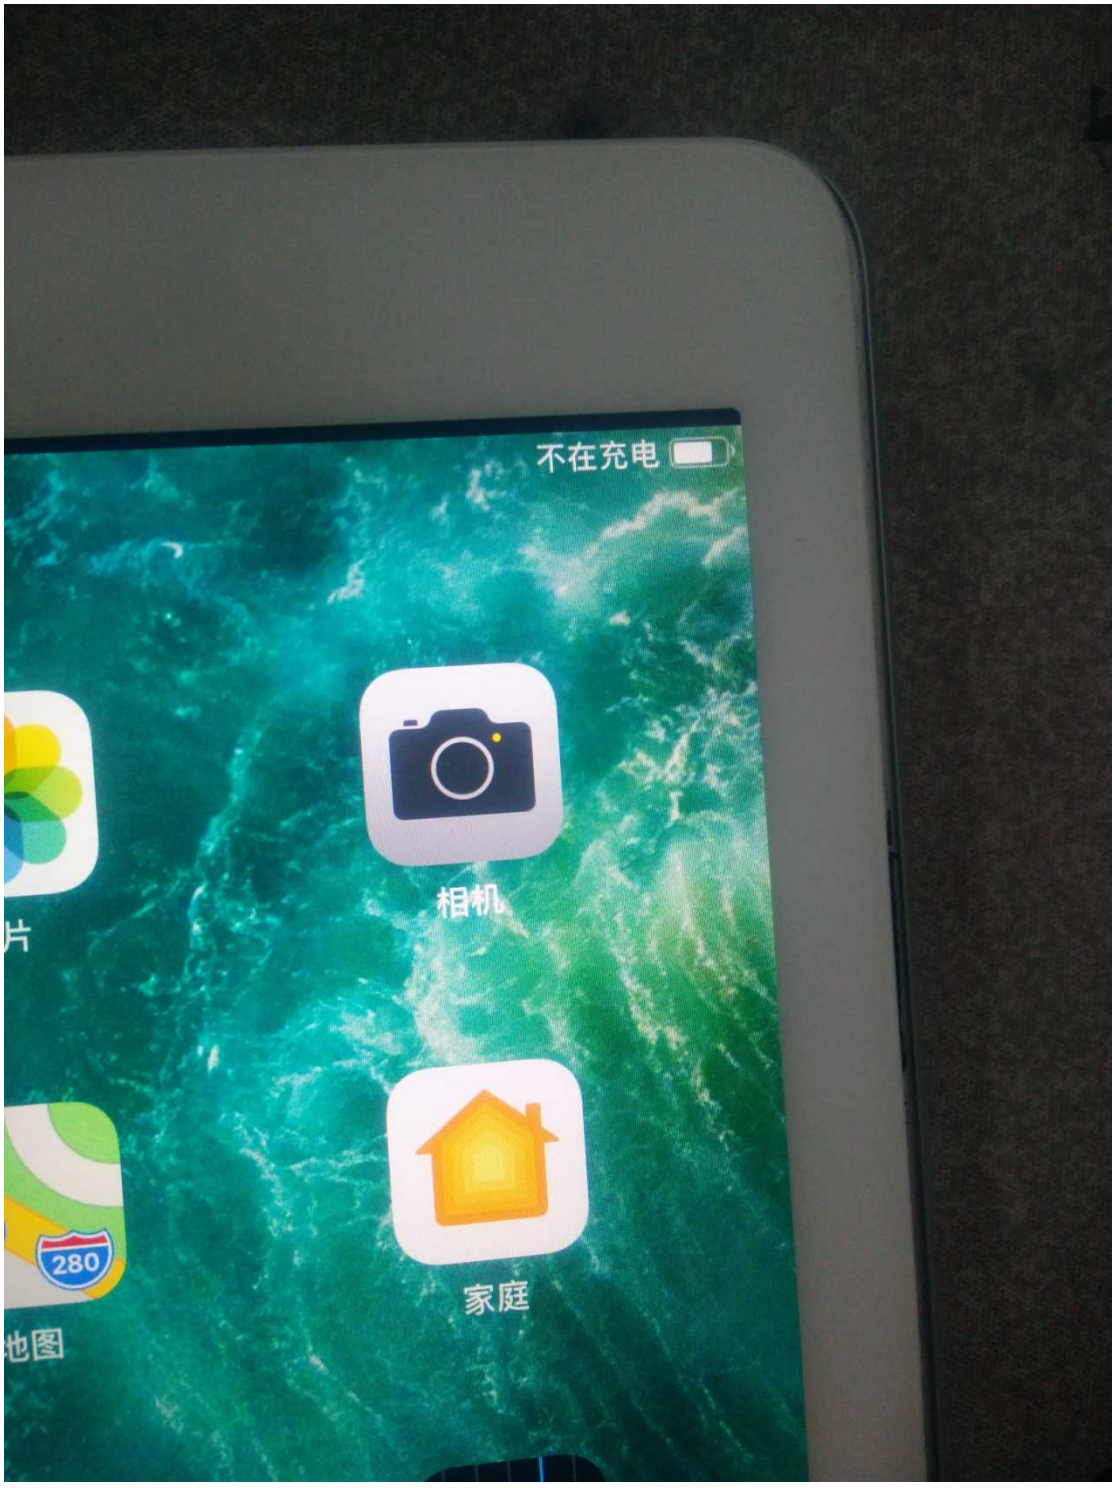
Ipad5 No Power ON repair

Today took the customer tablet No Power ON, first carefully look at the tablet, 90% new, according to the switch does not respond, the battery is not powered, the battery is removed, charged with the activation of the small board, connected to Adjustable Power supply, stop at Fixed current 260, ,

Take a look at the motherboard.



It seems that I have not found any wrong problem, more than 200 currents, the key consideration is 3vVCC, the photosensitive sensory distance, the compass, NAND 3v, u2, in the end, and then carefully observed, and found that u2 sticks a certain soldering oil, I Judge, change, take a look, there is Solder joints linked, redo it again, measure the battery voltage 3.8v, connect the motherboard, try to boot, a little excited, boot, and, into the interface, , not even charging,



, 'The battery will not be broken, try a good battery,
