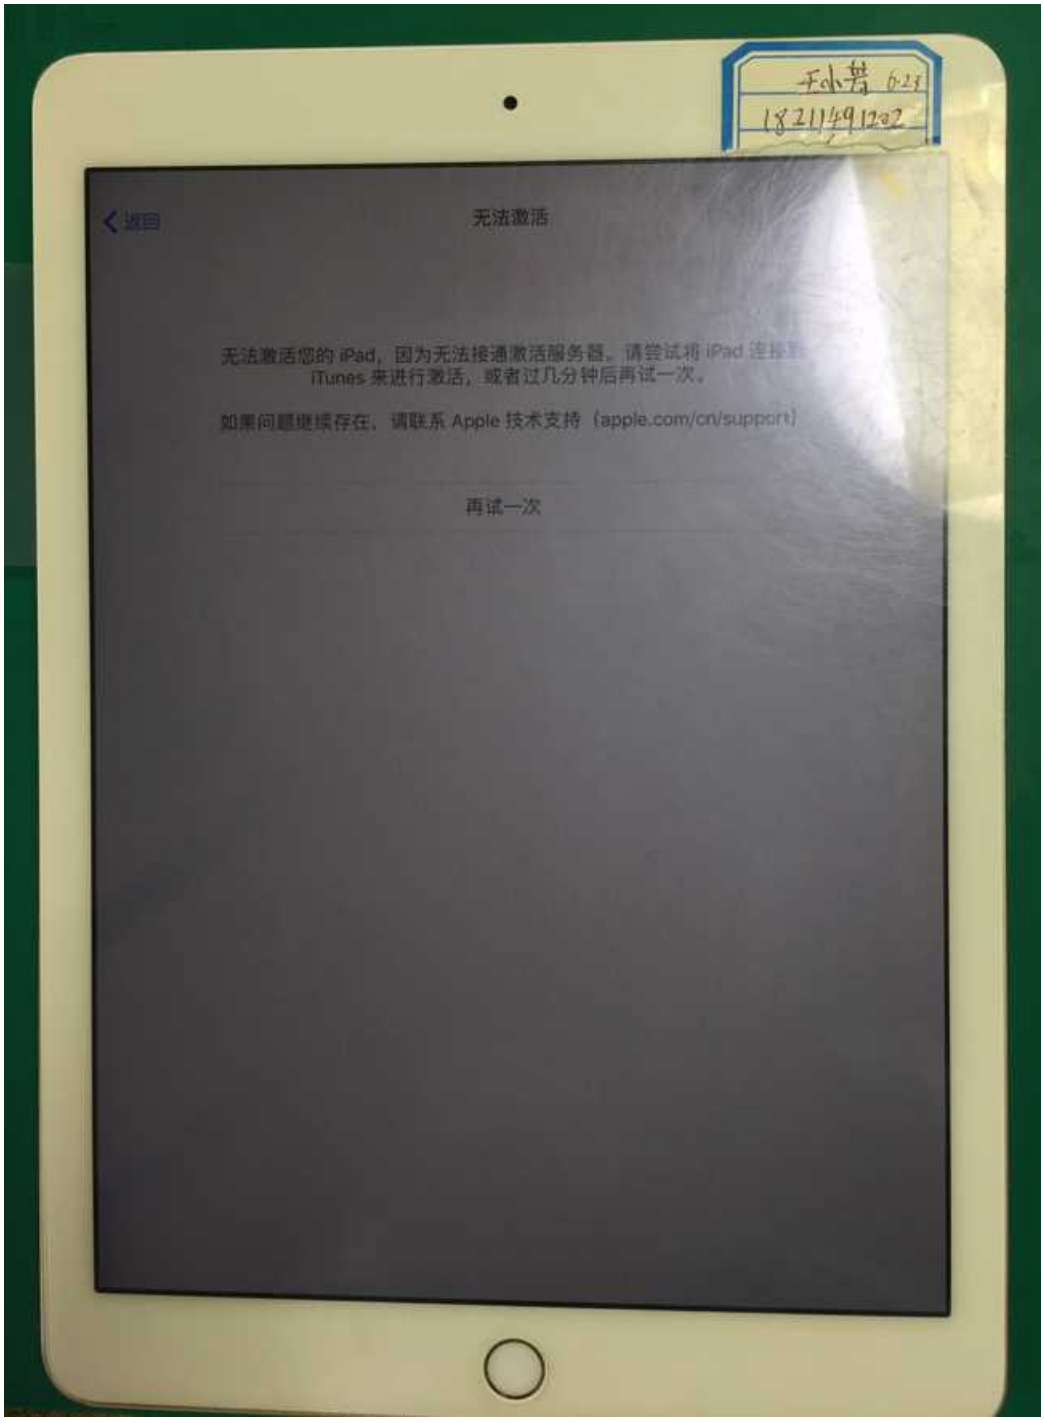
Ipad 6 cannot activate maintenance

Fault model: ipad 6 (air2)

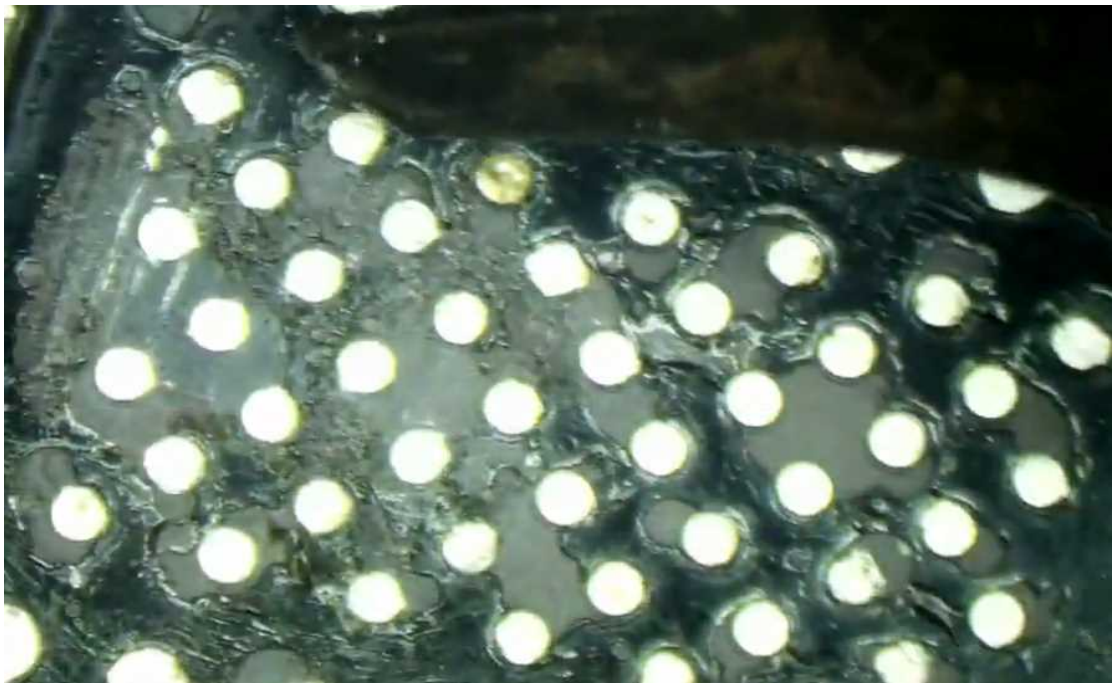
Symptom: Cannot be activated.



Fault Analysis: This problem occurs in IPAD. Generally, the NAND serial number WIFI Bluetooth three-code does not match.

Maintenance process: disassemble the microscope to observe the motherboard, and sure enough, the NAND has soldered traces.

Removing the NAND found that the NAND was soldered at low temperature and had not been scratched with solder pad.



Repair result: After cleaning solder pad, NAND writes the matching three codes, and the activation is successful after Recovery.
