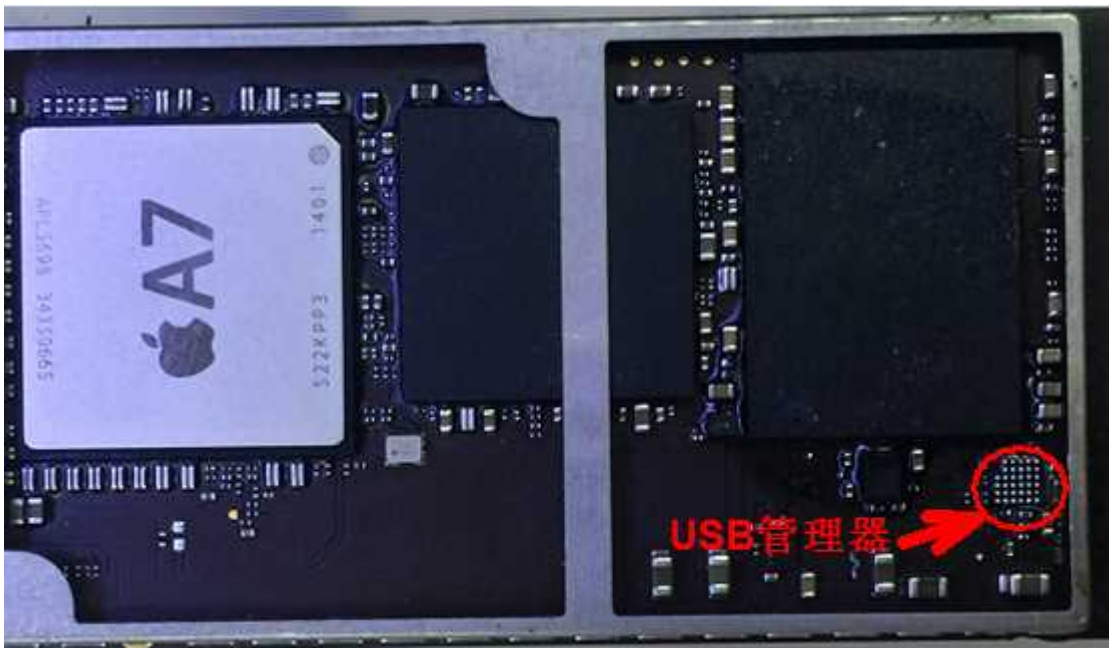
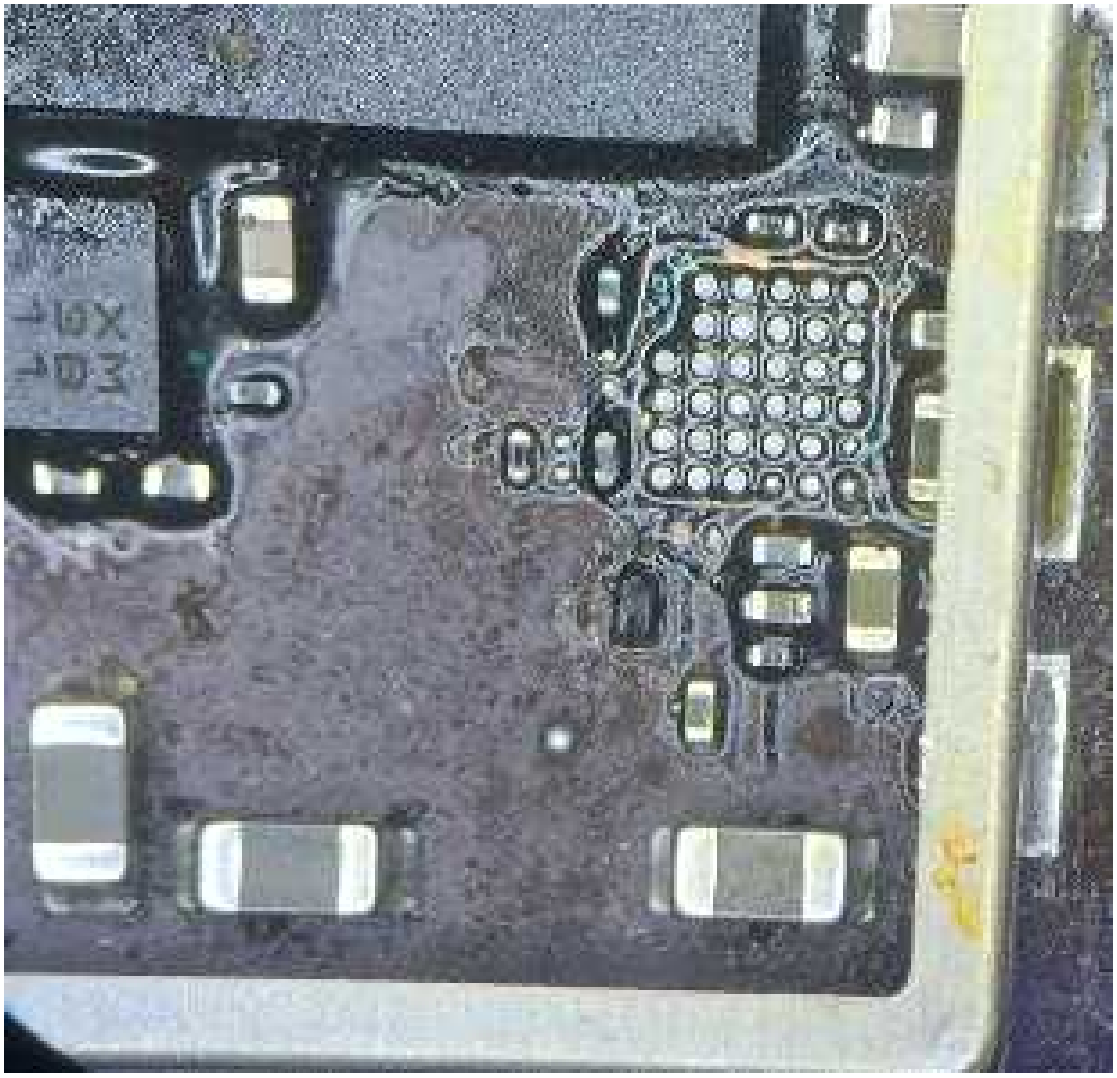
IPAD AIRWhite Apple power down

Symptom: The customer sent an ipad air. After the customer repaired the fault, it was Screen no display after White Apple. The customer could not charge before the fault was repaired.



Repair process: After replacing the USB manager, plug in the USB data cable to turn on the i4 and no response.

Measurement USB Manager VCC is normal, remove the USB Manager and find that USBcharging connector to USB Manager has 4 lines open



After flying the line, solder the USB manager and connect to the machine,

but still Screen no display after Screen no display
